Evolved Self Publishing, United States, 2011. Paperback. Book Condition: New. 208 x 137 mm. Language: English . Brand New Book ***** Print on Demand *****.Do we have free will? Answering this question with logic drives us into paradox. Instead, the author takes us to a world where people know they really do have free will. As a result their science takes a different direction, leading them to an evolutionary theory totally different from ours. In this theory, is there intelligent design? Yes. Is it the work of a supernatural agent? No. Instead, through an audacious surmise, the author arrives at a theory of evolution close to common sense, that supports traditional thinking about the self. Who should care? Anyone whose work affects the opinions others have of themselves. And the humanities generally, under threat from encroachment on their turf by the sciences, all of whose specialties depend on traditional notions of free will. This ingenious story can serve as a model for how the balance between the arts and sciences can be reset.
